Febr. 27, 1996

Dear Kevin,

Here are the strains (small amounts of silicagel) which we have confirmed for deposit to FGSC.

I have enclosed a corrected list (one strain omitted, 2 with minor corrections). I am listing our silicagel number with my initials, and showing the future FGSC number as well. The only marker that is not reliably retested is *acrA1*.

"Origin" in most cases gives the number of a diploid from which segregants were isolated - without knowing the composition of the diploid that is not much use, but I shall try to indicate more info on the deposition sheets; these will follow eventually. Some of the new mutations were induced in strains from Wageningen, NL, i.e., strains which have an "N" number.

Let me know if there are any problems.

All the best

Dita Kafer
