Kansas City, KS 66103-7240

PLEASE PROVIDE COMPLETE INFORMATION

Reprints of other data relating to this deposit will aid the Stock Center and recipients of this strain.

Accession
number

SPECIES..... *Aspergillus niger*..... A977.

GENOTYPE cspA1; fwnA1; leuA1; pdxA2; oliC2 sftC101; crnB12

DESIGNATION OF

MUTANT ALLELES 1 1 1 2 2 101 12

STRAIN DESIGNATION IF WILD-TYPE

YOUR STOCK NUMBER FOR THIS CULTURE EK222

YOUR STOCK NUMBER FOR THIS CULTURE.....
include stock no. from other collections

ORIGIN OF STOCK..... EK222 =haploid from 2n (052); see FGSC# A975 or A976.....

[View Details](#) | [Edit](#) | [Delete](#)

For example - obtained from, genetic background, from diploid with; or if collected from nature, collection point, substrate and collector.

PUBLISHED REFERENCES. None; special feature: *sftC101* is sulphite requiring, and resistant to selenate; see Buxton et al. (1989, Gene 84: 329-334) for similar *A. niger* mutants and the *A. nidulans* *sC* gene clones used.

Media and methods as in Arst (1968) *Nature* **219**: 268, & Gravel et al. (1970) *Can. J.Genet.Cytol* **12**:831-840.
(for any information regarding this stock)

IF UNPUBLISHED, please indicate strain of origin, mutagen, worker,
genetic background, important characteristics...Strain of origin for all strains: FGSC# A733.

sft-101 was “complemented” by transformation with the A.nidulans sC gene (-> sftC101); it mapped in Lg. VII.

A. niger **sft** mutants, selected on high conc. of selenate (0.1 mM in -NO₃ free MM urea) likely are either 2 types; in A.nidulans **sB** -> sulfate permease or **sC** -> ATPsulfurulase (Borges-W+Turner et al. 1995, MGG 247:423-29)

COMMENTS (special growth requirements, aberrations, heterokaryon compatibility, special uses of strain.

Sulphite requiring mutants of *A. niger* do not show thin mycelial growth on MM plates which in *A. nidulans* causes background growth in transformations unless reduced by agarose replacing agar in MM.

(use back of page if necessary)
