

Hi Kevin,

Sorry for the delayed response. I've been out of town. Several of the strains carry the pyrG (orotidine monophosphate decarboxylase, equivalent to pyr4 in *N. crassa*). This requires supplementation with 2.5 mg/ml (10 mM) each of uridine + uracil even in complete medium. The pyrG strains we sent are:

AXL 1
AXL 4
AXL 8
AXL 19
AXL 20

If these are the ones that aren't growing, I think that's the problem. Let me know... I'm sorry we did not make this clear when we sent strains.

Michelle
