Dear Dr. McCluskey,

Enclosed please find two *Aspergillus* spore samples in 15% glycerol:

1. *Aspergillus flavus* NRRL 3357 wild type strain used for A. flavus EST project. The ATCC # is 200026 isolated from Peanut cotyledon.
2. *Aspergillus niger* strain NRRL 3. The ATCC # is 9029. DSM 2466. I am not completely sure this is the strain used for genome sequencing by DSM at The Netherlands.

A1120

A1121

Please feel free to contact me if you have any questions regarding these strains.
