16/8/13

Dear FG-SC,

Please find enclosed two strains of A. nidulans for deposition at the FG-SC, being two gene deletion strains produced using the A. nidulans gene disruption cassettes provided by the FG-SC. These are gene deletions of $\Delta AN3239$ and $\Delta AN5993$. Both require growth on complete media, or mineral media supplemented with pyoxidine. There will be further gene deletion mutants to come once these have been characterised at Nottingham.

Best regards,

Paul Dyer
