Dear Ray:

Dot has shown me your note on NM160.

I can't come up with a better solution, but hope this is temporary. Inasmuch as NM160 is to be called phen-1 although it shows no requirement of response to phenylalanine, I hope Bill's instructions when stocks are sent out can be made explicit on this point, and that NM160 behaves like a tyrosine mutant and also responds to leucine. The deposit sheets for 1294 and 1295 don't now have any information on requirements, because I didn't know its status when the stocks were deposited. *will state*

I'm glad you will make the Congress. We will stay at the Hotel Takanawa, arriving Saturday night August 17. See you in Tokyo!

Yours,

David
