

The sensitivity to arginine may be altered genetically or physiologically.

aga was first induced in arg-5, arg-8A and was extracted by crossing the derived triple with 73a. The aga single mutant was then crossed to 73a, the "b<sub>1</sub>" to 74A and the "b<sub>2</sub>" to 74A. The stock sent is reisolated 9 (129) of the 3rd backcross (b<sub>3</sub>).
