Bill:

Here's a culture requested three times last year. I thought you might have it.

Unfortunately, I have not checked it out, but it's been ok from same silica gel stock before. The nutritional verification can be done as follows:

- (a) NO growth on MINIMAL (arg 5)
- (b) NO growth on ORN-HCl (500 µg/ml) as SOLE Nitrogen source (ota)
- (c) Putrescine requirement on arginine. (aga) →
