

STANFORD UNIVERSITY • OFFICE MEMORANDUM

DATE: 2 June 77

TO : W. Ogata

FROM : Fgsc

SUBJECT:

Dear Bill -

Thanks for the stocks.

Metzenberg's A^T and a^T should be handled in a parallel way to Fgsc ~~2905~~ ²⁹⁹⁵ ($A^{S(E)}$), #2946 ($a^{S(E)}$), ~~3010~~ ³⁰¹⁰ ($a^{S(V)}$), and 3054 ($A^{S(V)}$).

The superscripts (raised T's) are necessary, because that's the way it was published.

Metzenberg's "C4079, T17- A^T " and "C507, T5- a^T " are his stock numbers, aren't they?

One way to set them up would be

<u>Strain designation</u>	<u>mt.</u>	<u>Fgsc</u>	<u>Comments</u>	<u>Obs</u>	<u>Ref</u>
C 4079, T17	A^T	—	A from <u>tetrasperma</u> introgression — question into <u>cross</u> .	R L M	

and go under "Neurospora interspecific hybrids".

Regards.

David
