Dear Bill,

Please find enclosed for deposition in the FGSC a culture of crib-1 (cytoplasmic ribosome biosynthesis) a cold-sensitive mutant of Neurospora crassa that is defective in ribosome biosynthesis. Since we are in the midst of an extensive biochemical characterization of this mutant strain, I would be grateful if you would hold this culture and NOT release it to other workers at this time. When we have finished our studies I will be sure to notify you concerning making the strain available.

Yours sincerely,

Peter

Peter J. Russell
Associate Professor of Biology
