Record of Neurospora Culture

Fungal Genetics Stock Center, Botany Department, Dartmouth College
Hanover, New Hampshire, U.S.A.

NCRASSA
FGSC# 3519

GENOTYPE chol-2, ylo-1, tsp-1 — A (mating type)

ALLELE DESIGNATION(S) (isolation no.) 47904(t), Y30539y, RP 99 (52)

YOUR STOCK NUMBER FOR THIS CULTURE ~~6122~~ 6122

ORIGIN OF STOCK DP crosses.
(for example - obtained from, induced in, from cross with, etc.)

PUBLISHED REFERENCE

(for data regarding origin, linkage, characteristics, etc.)

IF UNPUBLISHED, please indicate strain of origin, mutagen, worker, distinguishing characteristics

LINKAGE GROUP(S) VII L, VI L, VI R; COMMENTS (special growth conditions, aberrations, heterocaryon compatibility, genetic background, complementation group, etc.)

(use additional space on back of page if necessary)

YOUR NAME David D. Perkins DATE 22 March 79

opp mt = 3520

Comments:

Marks extremes of ~~that~~ L.G. VI, with ylo in middle. Most (~95%) of viable ~~black~~ black spores are tsp+ under normal overnight ripening conditions.

VI tester

May be preferred to chol-2 ylo-1 tsp-2 or a VI tester. But the latter ~~is~~ should be best, because it is also useful, and is needed when rearrangements are tested.
