Dear Craig:

un(T42M38) PgSC #4306 is apparently
allelic with un-16, based on:

- (1) Close linkage to un-3 ^{or} mating type (0/172 recombinants)
- (2) Negative heterokaryon test with un-16 (T42M69).
- (3) Positive heterokaryon test with un-3 (55701x).

(Het-compatibility shown by complementation of the un-3 + un-16
testers). There are no recombination data for un(T42M38) x un-16.

I suggest it ^(T42M38) be listed as un-16, but that the above
data be given to anyone using it.

David Perkins

Notified by phone 5 June 84. But evidence not given.
