Dear Craig:

We recently had a request for any nuh mutants that seem to contain less nuclease. Since we had to get them out and check them (for viability) I decided to pack a second sample for FGSC as listed below and mail them to you. Since we shall mail you also other mapping (and mus?) strains later this year, you might wait giving them numbers and allot another consecutive sequence of FGSC# when the next batch arrives. Incidentally the testing of halo phenotype is not too easy. If you are at the Vancouver meetings I'll explain to you then.

All the best,

Jika

E. Kafer

EK/sb

PS. Fred de Serres just told me that he deposited urs-5 which I would like to check for allelism against mus(121). (could you send me his strains (FGSC # 4587 & 4588) when you have made aliquots)
