Arcata, California 95521-2400

Dear Craig,

Enclosed please find copies of the deposit slips for the strains I submitted to you some time ago as well as a manuscript describing their synthesis and uses which was submitted for publication to *Genetica* in December. The rearrangement strains that were marked with $f1$ would be more fertile than their $f1^+$ counterparts and are particularly useful when scoring rearrangements derived from the BLNC-1 complex.

Please accept my apologies for the delays in getting this material to you.

Sincerely yours,

A handwritten signature in cursive script that reads 'John F. Leslie'.

John F. Leslie
