

① This strain is resistant to the phosphate analog, ortho-vanadate (Na_3VO_4).

② There are no special growth conditions for this strain.

The strain can be tested on plates containing the following medium:

Phosphate-free Vogel's Minimal Medium N

2% Sucrose

50 mM HEPES, pH 7.5 with KOH

0.3 mM Sodium ortho-vanadate

2% Bacte. Agar

Conidia from fresh slants are spotted on the plates and incubated overnight at 30°C . Score for growth or No growth.
