To: Craig W.

Date: 9/23/92

From: Bob Metzger

Subject:

Here are three strains of the nine described in my letter to DDP and DJJ, of which you should get/have gotten a copy. They are α , ξ , and i . The only one I'm sure the FGSC needs is ξ , which is A/a of the Warcup-Bornes N. tetrasperma. α and i are good candidates for the final type-strains of a and A, respectively, but DDP, DJJ or Raju might have other ideas. Meanwhile, you have these, and you might put them in limbo until one of these guys in the loop decides.
