10/8/93

Dear Craig: First of all, thanks for the strains!

→ My strain 76-22, now your 7537, is from Dave Stadler's mtr col-4 trp-2ax 74-OR-23-IV A. It was the very rare recombinant between mtr and col-4. This SR62 was confirmed by us to be a complete deletion*

→ My strain 76-21 (which I didn't send you) is SR33-A* which is also a complete deletion, made in a parallel cross. (Do you want it?)

My strain 76-23, ^{now your 7538} is the opposite mating type of the same thing, sent to me by Carl Yamashiro. See his letter. Probably I should have sent ~~the~~ my own isolate, 76-21, or you should attribute the strain to him. But it's been > 4 months since his letter.

Best,

BbM

* Unlike mtr (1564), which has part of the gene still present
