R.L. Metzenberg

Dear Bob,

Enclosed are cultures of two of our spontaneous mtr mutants, which we believe from the results of hybridizations of restriction digests to have deletions of the complete mtr gene. Both strains have the genotype mtr col-4 trp-2 a.

I will send along a copy of our manuscript on the molecular spectrum of vegetative mutants at mtr as soon as Davin Dillon makes the figure showing the complete sequence. Should be just a few days, I hope.

Best regards,

Dave
