ORIGIN OF STOCK 74-0223-1A, gamma-irradiated, followed by backcross
to 74-028-1a

(or example - obtained from, genetic background, from cross with; or if collected from nature, collection point, substrate and collector.

PUBLISHED REFERENCES none

(for any information regarding this stock)

IF UNPUBLISHED, please indicate strain of origin, mutagen, worker,
genetic background, important characteristics as above - strain requires
supplementation with unsaturated and polyunsaturated fatty acids -
(1 mM)
impaired in desaturation of fatty acids - tendency to revert to wild type

COMMENTS (special growth requirements, aberrations, heterokaryon compatibility, special uses of strain, etc.)

Difficult to cross - try supplementing with 5 mM linolenic acid (fresh,
after autoclaving) and 1% Tween 80, as heterokaryon (above). Ascospores
terminate very slowly (weeks). Probably cold sensitive.
