IF UNPUBLISHED, please indicate strain of origin, mutagen, worker, genetic background, important characteristics as above - strain requires supplementation with unsaturated fatty acids. Impaired in desaturation to polyunsaturates, but grows well on 1% Tween 80. May revert spontaneously to wild type.

COMMENTS (special growth requirements, aberrations, heterokaryon compatibility, special uses of strain, etc.)

May be difficult to cross, may be cold sensitive. Use above heterokaryon in crosses, and try supplementing with Tween 80 and 5mM linolenic acid. Ascospores slower to germinate than wild type.
