Dear Barbara,

I have gone through the strains that you sent recently and found the duplicates. They are, as you know:

new strain #	old strain #	ddp#
8217	8198	P2543
8218	8199	P2632
8219	8200	P3425
8220	8201	P4157
8221	8202	P4158
8222	8203	P4335
8223	8204	P4576
8224	8205	P4578

I could not find P4145 at all.

I will do my best to remove mention of the second set of numbers for these strains, but will not reassign them to other strains. These numbers (8217- 8224) will be retired.

I hope that this is suitable.
Thanks for following up on this.
I will look forward to learning more about these strains.

In the mean-time, I will pose a related question. It seems to me that these should be in the section on Neurospora collected from nature, species uncertain on page 141 of the 6th edition of the catalog. Is that where you would put these strains?

Sincerely,

Kevin
