June 3, 2002

Dear Kevin,

Enclosed please find the six *Fusarium* strains that I threatened to send to you as of last week. I hope (and assume) that these guys don't cause you any headaches as far as getting them stored, but let me know if there are any problems. Just treat them like you would any *Fusarium moniliforme* isolate and they should behave.

The included strains are:

F. verticillioides (= *F. moniliforme*, = *Gibberella fujikuroi* MP-A, = *G. moniliformis*)

KSU 00924 8908

KSU 04644 8909

F. konzum (= *Gibberella konza*) – Female fertile testers for a new species we are about to describe

KSU 10595 8912

KSU 10653 8913

KSU 11615 8911

KSU 11616 8910

Thanks again. Let me know via a quick E-mail note whether there are any problems. I will be in Australia from June 14 – July 1, and if you need to reach me during that period just drop me an E-mail at <kzeller@ksu.edu> instead of my normal address.

Sincerely

Kurt A. Zeller, Ph.D.
