Dear Kevin,

I enclosed 2 strains which you requested for deposit at FGSC.

As I mentioned earlier mail, if one of ku homolog is disrupted, it is enough as a host of targeting. In this letter, I will send *mus-52* mutants which carry mutation of KU80 homolog gene (*mus-52::Hyg<sup>r</sup>*). Our paper is now in Press. I hope it will come soon. Please get informations from the paper in addition of deposit sheets.

You will find 2 aluminum foils which include small discs with conidia of the strains. Put discs on the minimal medium. If you have any troubles, please let me know.

Sincerely yours  
Hirokazu Inoue
