Hi Sharon, Hi Igor,

The FGSC now has most (non yeast) fungi that have had their genomes sequenced. Please see:

<http://www.fgsc.net/scripts/catalogDetails.asp?CatNum=3>

We are happy to deposit the Rhodotorula strain, or if you prefer, we can just receive it and make DNA for the JGI.

We are currently preparing gDNA for the JGI from a number of fungi.

kevin
